## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Cleveland et al. (US Pat. 5,407,622) or Orlowski et al. (US Pat. 5,153,023). The references are cited by Applicants.

Cleveland teaches a plastic article having selected surfaces metallized (see abstract). The polymer article with an adherent metallic surface pattern may be formed by a two shot molding technique in which one molding shot utilizes a crystalline polymer resin and the other molding shot utilizes an amorphous polymer resin. The surface areas having the amorphous polymer resin is metallized (see col. 4, ln. 36-45).

Both crystalline resin and amorphous resin are thermoplastic (see col. 5, ln. 24-44). The metallization is carried out after activating process using plasma activation (see col. 6, ln. 44-56). Example I shows the circuit pattern on polyethersulfone resin containing 15% palladium-treated clay filler (see col. 12). The adherent is then immersed in an electroless copper solution to deposit a 25-micron layer of copper on the seed layer containing palladium-treated clay filler (see col. 13, ln. 26-50).

Orlowski discloses a plastic article having a thermoplastic substrate coated with a solution of palladium acetate. The coated substrate is then activated by a laser beam forming a

10/517,041

Art Unit: 1794

palladium metal pattern on the soften plastic surface. The substrate is then immersed in an electroless copper plating solution to form a copper layer of 25 microns.

## Contact Information

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thao T. Tran whose telephone number is 571-272-1080. The examiner can normally be reached on Monday-Friday, from 9:00 a.m. - 5:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton I. Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
